

## Case History #AI901 Accident Site Management

Baker Engineering and Risk Consultants, Inc.

### **BENEFITS:**

Effective site management resulted in savings to the client of \$10-15 million in this catastrophic accident

For a large pharmaceuticals client that experienced a catastrophic explosion, BakerRisk managed the site's safety and health issues and provided comprehensive evidence documentation, collection, retention and distribution. Activities of clean-up and recovery contractors were monitored to ensure that all evidence was captured and retained. This involved coordination of the activities and requests from over 300 third parties and agencies.

BakerRisk's effective site management was recognized by agencies, third parties, and the client as a model for major accident site management. This allowed the client to concentrate on recovery of usable equipment, cleanup of the site, and demolition that minimized downtime, resulting in a savings of \$10-15 million for the client.
