

# SECURITY VULNERABILITY ANALYSIS

---

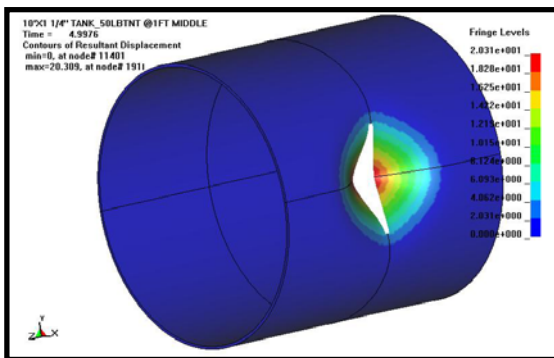

**Baker Engineering and Risk Consultants, Inc.** (BakerRisk) offers a unique resource to assist in meeting the challenges of the “post 9/11 world.” The identification of hazards, consideration of threats, and evaluation of potential consequences has been BakerRisk’s core business for more than 18 years. In addition to conducting a security vulnerability analyses (SVA), we have the capabilities to conduct detailed analyses of high-risk scenarios, identify effective risk reduction measures, design structural upgrades, design and conduct

emergency response exercises, and integrate security into your Process Safety Management System.

Our Blast Effects and Structural Analysis experience analyzing potential high explosive events for military, government, and public installations and conducting explosion and bombing investigations provides us a unique ability to effectively assess threats at industrial facilities.

Our Process Safety experience in PHAs, EPA RMP, and risk analysis provides us the expertise to consider scenarios, logically analyze vulnerable assets and threats, and develop effective risk reduction measures as well as modifying management systems to sustain improvements. And our alliance with Physical Security consulting firms provides expertise in the areas threat characterization.
